Arch viz portfolio, 2026

PROJEKT SYLVANA

In the forest, between Hévíz and Keszthely

Since 2020

Background

In 2020, a decision was made to purchase the site of nearly 100 hectares between Keszthely and Hévíz.

Interest in the site was initially sparked by a smaller-scale property development idea. More detailed studies, however, made it clear that the site's natural assets, location and size offer the potential for a considerably larger, long-term development.

The project builds on a thorough knowledge of the area: between 2002 and 2020, its initiator spent regular and extended periods in Keszthely and Hévíz, and so came to know the two towns, their surroundings and their development potential first-hand, over many years.

A detailed survey of the site was followed by an environmental study. Its findings, together with the site's natural and economic assets, confirmed that acquiring the entire site is justified in the long term as well.

Purchasing the land was a complex process that took several years. Agreements have now been reached with nearly 100 owners, and further land beyond what the planned project requires has also been acquired.

After a detailed expert survey, the reclassification of land use began: on the basis of the expert assessments, 23 hectares have been removed from the forest land category.

DECISION · VE/32/1522-3/2025

Land parcels removed from the National Forest Database

Veszprém County Government Office, Forestry Department · 21 March 2025 · Subject: deletion of other subcompartments

The Government Office removed the following land areas directly serving forest management:

Other subcompartment	Area (ha)	Affected land parcel (partial area)	Legal basis of removal
Keszthely 203TI2	13.13	Keszthely 0489/36a	Evt. 14. § (2) f)
Keszthely 203TI3	3.64	Keszthely 0489/36h	Evt. 14. § (2) f)
Keszthely 203TI4	0.21	Keszthely 0489/10c	Evt. 14. § (2) e)
Keszthely 203TN1	2.32	Keszthely 0489/3	Evt. 14. § (2) c)
Keszthely 203TN2	0.91	Keszthely 0489/7	Evt. 14. § (2) c)
Keszthely 203TN3	0.68	Keszthely 0489/8	Evt. 14. § (2) c)
Keszthely 203TN4	3.04	Keszthely 0489/43a	Evt. 14. § (2) c)
Keszthely 203TN6	0.92	Keszthely 0489/58a	Evt. 14. § (2) c)

Today

Present

Over the past few years, the concept of the SYLVANA project has gradually taken shape.

The fundamental aim of the project is to rehabilitate the site, to preserve and enhance its natural values, to protect the forest and its flora and fauna, and to create a close-to-nature community for later life that offers a high quality of life.

SYLVANA aims to fill a gap in both Hungary and Europe by creating an environment that, after a full working life, offers a new way of living, combining closeness to nature, security, health and wellbeing, and community life.

Experienced designers and consultants contributed to the preparation of the project.

The completed material provides a sound basis for drawing up the final plans and preparing for implementation.

The goal is to create a high-quality, comprehensive institution that adds lasting value to Keszthely and its region, and whose professional, architectural and service standards can raise the town's international profile and its appeal to visitors.

After the final plans

Future

Once the final plans have been completed and approved, a suitable professional and delivery partner can be selected.

The aim is to find a partner with whom the project can be delivered professionally, to a high standard and in a way that is sustainable in the long term.

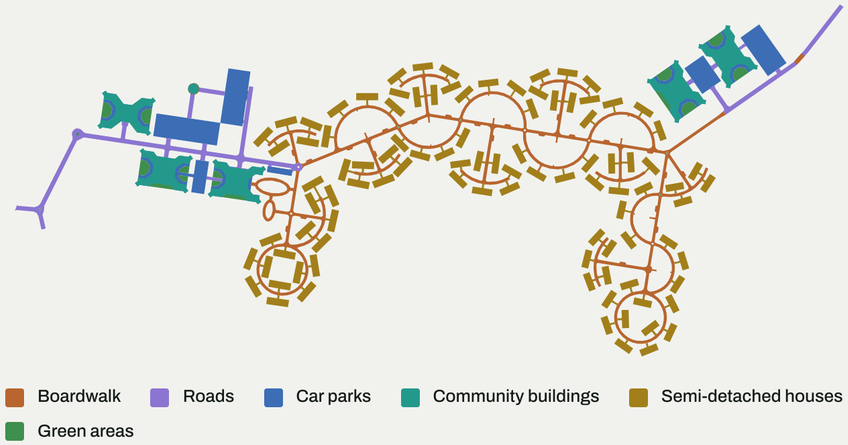
PROJEKT SYLVANA in the forest, between Hévíz and Keszthely

The heart of the site is car-free: the roads end at the car parks on its two edges. Further in, a raised timber boardwalk and golf-cart paths connect the 98 semi-detached houses, the five community buildings and the lookout tower.

The semi-detached houses have solar panels and green roofs, and the community buildings and the carports over the car parks are fitted with solar panels too. The houses are set among the trees, along the curving loops of the boardwalk.



196

homes in 98 semi-detached houses, three types: SYLVANA1–3 (45–65 m²)

5

community buildings, including a private hospital, and a 24 m lookout tower

02 House types

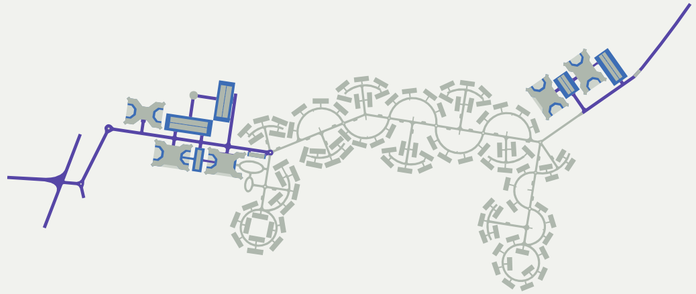
98 semi-detached houses, three home types

Type	Houses	Homes	Home size
SYLVANA1	25	50	45 m²
SYLVANA2	42	84	55 m²
SYLVANA3	31	62	65 m²
Total	**98**	**196**	–

Colours and shapes: SYLVANA1 circle, SYLVANA2 square, SYLVANA3 diamond

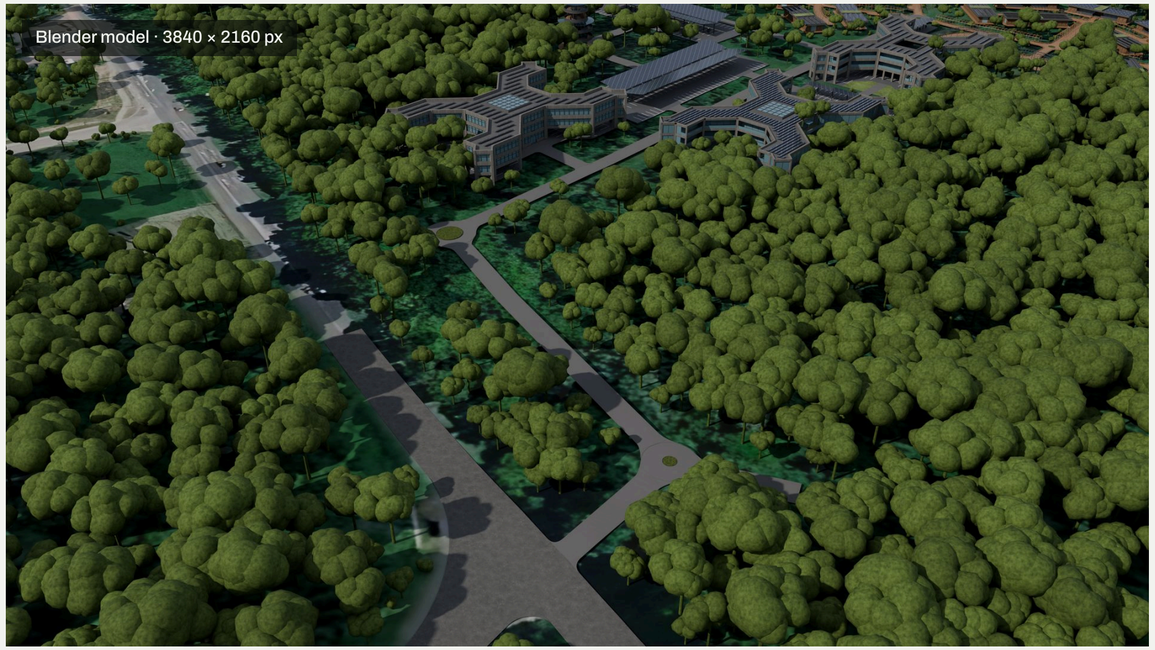
Two entrances, by car as far as the car parks

The site can be reached by car from two directions: from Hévíz in the west and Keszthely in the east. The roads follow an existing forest road, a clearing and a side road, and end at the car parks.



Roads and car parks on the site

Hévíz entrance



Entrance from Hévíz: the access road seen on the satellite image, continued towards the community buildings

The Hévíz junction from above; the roads follow the line of the existing forest road and clearing

Keszthely entrance: from the main-road junction to the community buildings

Keszthely entrance

The access road branches off at the main-road junction next to the petrol station and runs between the fields to the community buildings. The junction is in the foreground, the nursing homes and car parks in the background.

Keszthely entrance from the east, seen from the petrol station

The road through the forest

By car, under the trees

At eye level: the road through the forest and between the community buildings. The roads end at the car parks; from there, the way continues on foot along the boardwalk or by golf cart.

The road between the community buildings, under the trees

X-plan community buildings, solar carports

The Hévíz hub: community buildings, an inner garden and a car park with solar carports

D5 Render · 3840 × 2527 px

Five community buildings stand at the two ends of the site. The middle building on the Hévíz side is a private hospital, and the other two house a restaurant and services, guest rooms and staff flats, while the Keszthely side has two nursing homes.

Community buildings, lookout tower, car parks

Community buildings, car parks with carports and a sports ground

The Hévíz side: lookout tower, car park with carports, sports ground and community buildings

The lookout tower at the end of the footpath, with a terrace under parasols and a tennis court

Lookout tower

A tower with wraparound terraces, rising above the trees beside the Hévíz car parks. On the ground floor there is a terrace under parasols, with a tennis court next to it.

Height	approx. 24.3 m
Floor area	88 m²
Location	next to the Hévíz car parks and the sports ground

Solar carport in the car park of a community building

Community building and solar carport with EV chargers

The buildings

All five buildings have an X-shaped plan and three storeys (a ground floor and two upper floors).

Plan	X-shaped
Storeys	ground floor + 2 upper floors
Height	approx. 12.0–12.4 m
Footprint	approx. 1,845 m² per building, 9,234 m² in total
Solar panels on the roofs	2,083 m²

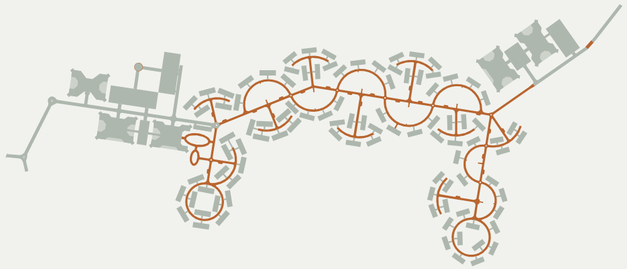
Green roof	on one nursing home, 1,634 m² + 618 m² roof walkway
Glass roof	on three buildings, 118 m² per building
Terraces	courtyard 1,033 m², upper floors 722 m²
Terrace gardens	635 m²

A timber boardwalk above the ground

Covered pergola walk on the boardwalk, with hydrangea planters

D5 Render · 3840 × 2527 px

The backbone of the site is a boardwalk of approx. 3.5 km that runs above the ground and links the Hévíz hub with the Keszthely hub. It is lined with arched pergolas, rest areas, planters and lamps, and the houses stand along its curving loops.



The boardwalk on the site

Arched pergolas on the boardwalk

Pergola boardwalk with climbing plants above the undergrowth, a community building behind

Junction with a tree island and a flower bed

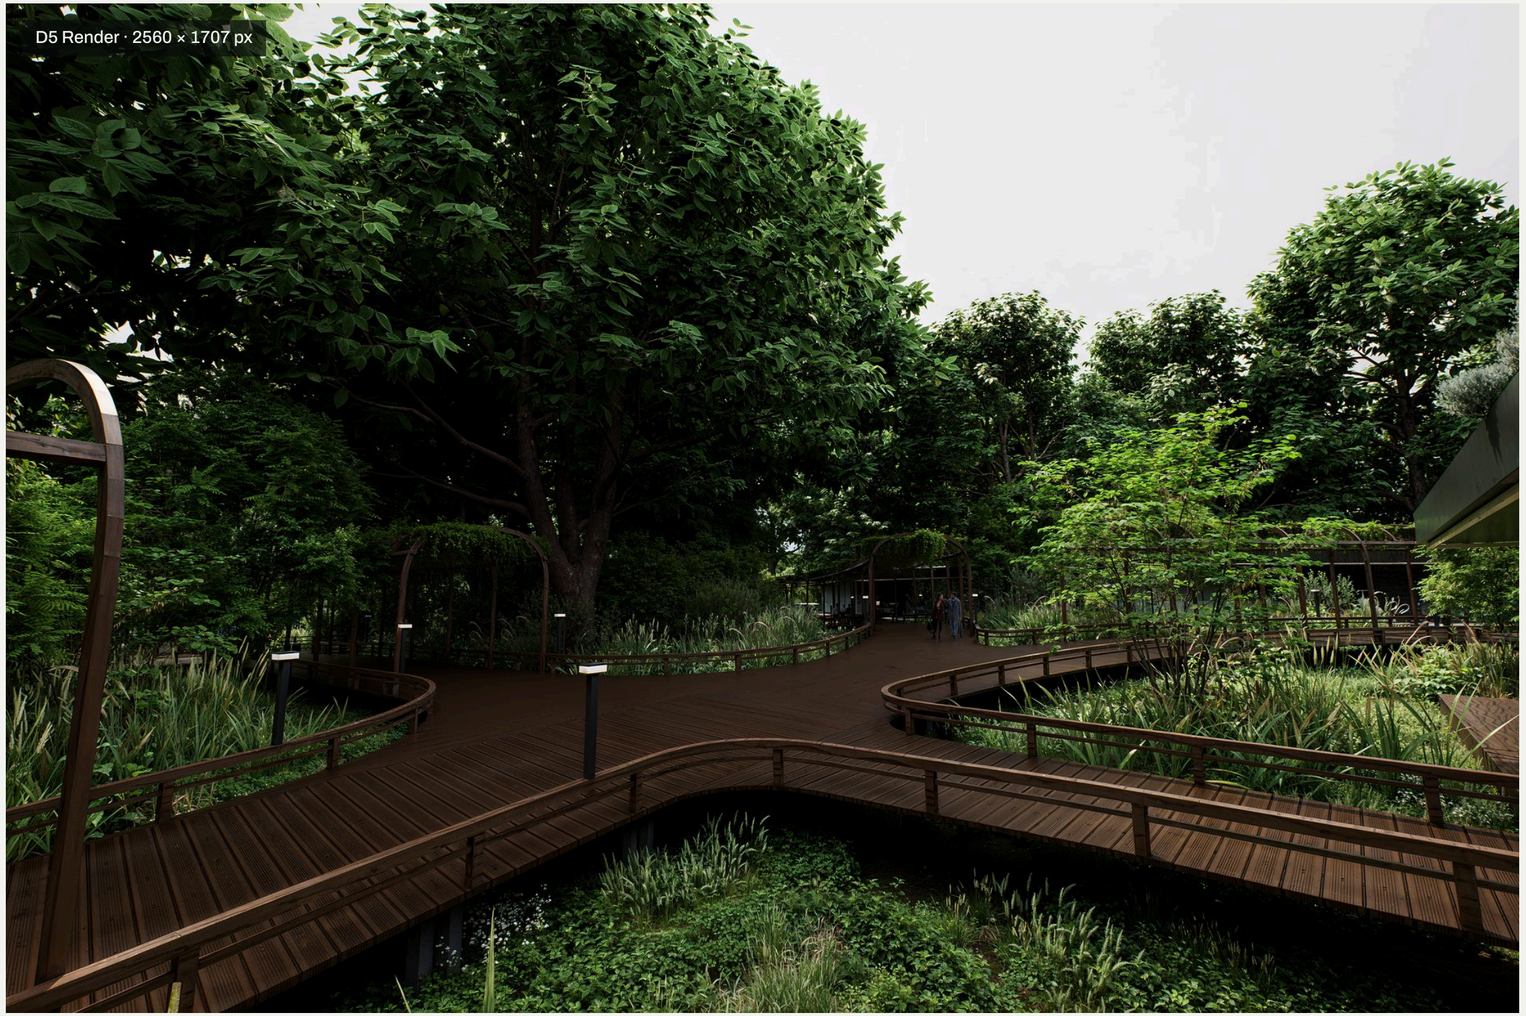
Golf cart on the pergola walk, a semi-detached house behind

Boardwalk junction between the houses, with a golf cart

Decking	Elements	Area
Main boardwalk decking	32 sections	14,027 m²
Junction decking	16 elements	1,854 m²
Rest bay decking	23 rest areas	491 m²
Ramps	7	119 m²
Bridge decking	1 arched bridge	96 m²
Total, without overlaps		**16,582 m²**

Length	approx. 3.5 km
Railing	approx. 7.76 km
Lamps	410
Pergolas	19 (17 arched + 2 oval)
Rest areas	23

Planters	32
Flower beds	12, totalling 94 m²
Stairs	7
Green islands at junctions	716 m²



A bend in the boardwalk above the vegetation

The pergola boardwalk towards a community building

c. 3.5 km

timber boardwalk above the ground: 410 lamps, 19 pergolas, 23 rest areas

98 semi-detached houses, 196 homes among the trees

Semi-detached houses with solar roofs; branches of the boardwalk lead up to the houses

D5 Render · 2560 × 1707 px

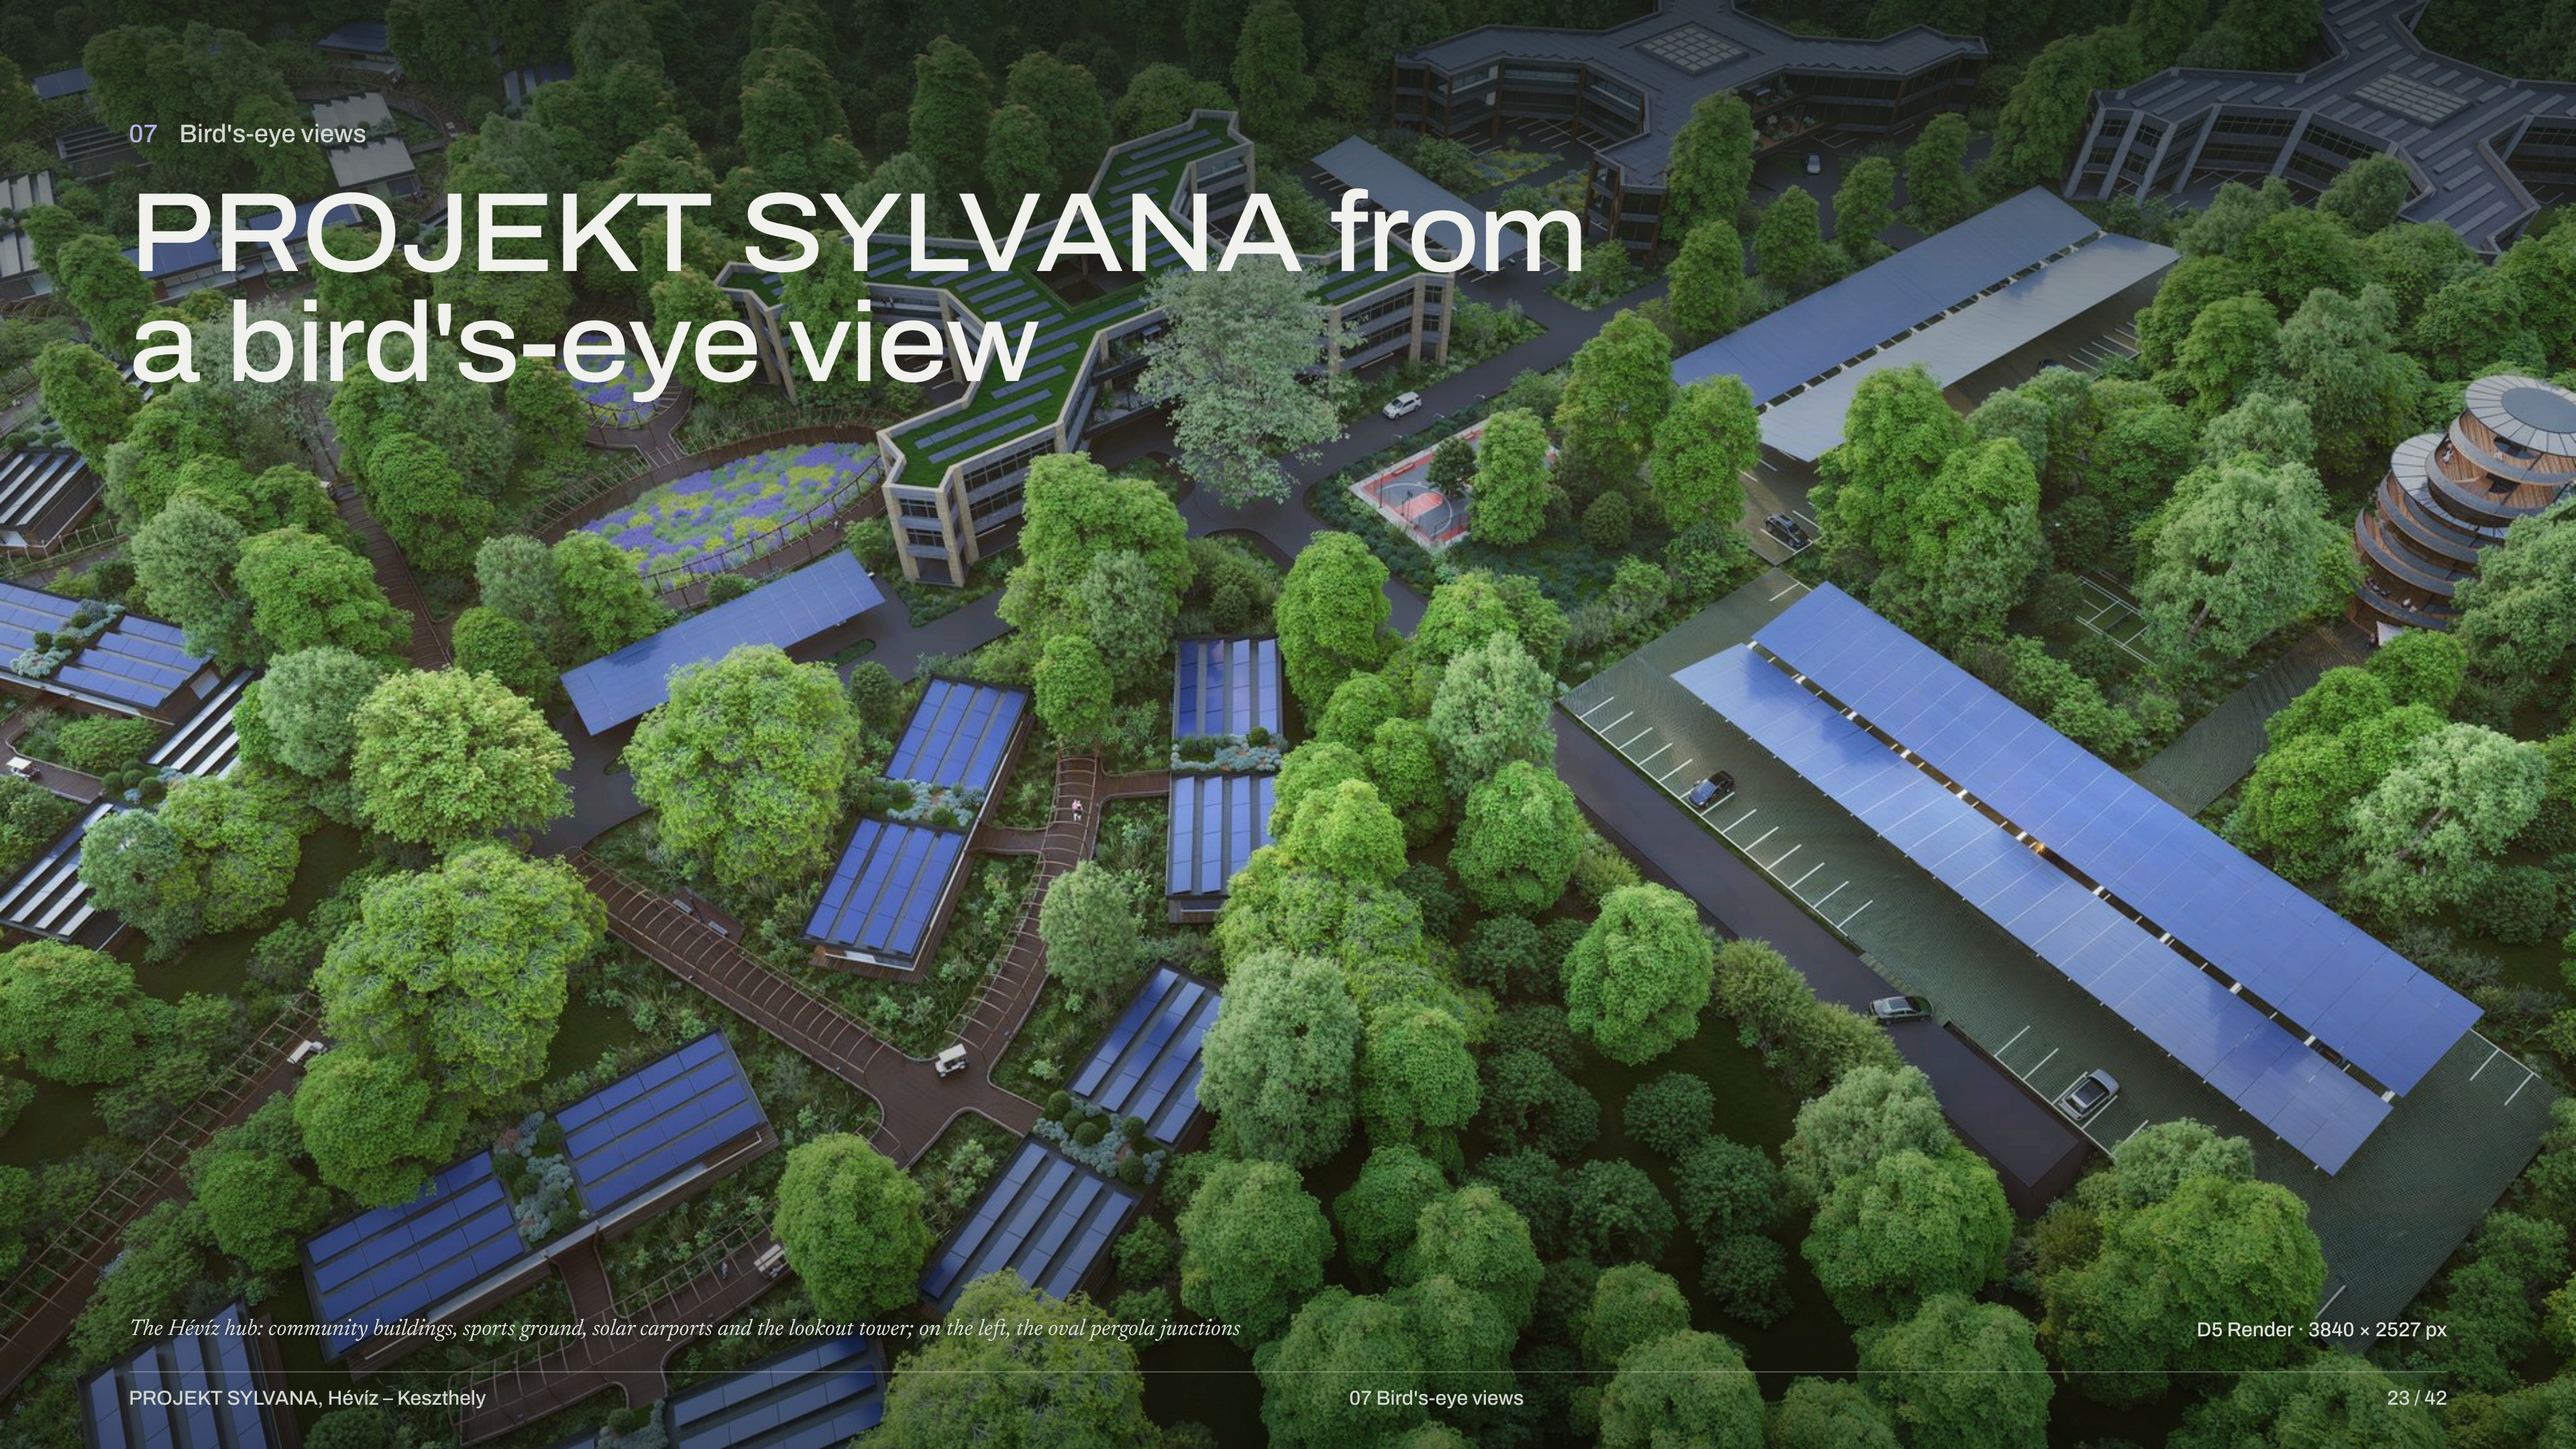
The semi-detached houses in the forest, linked by the boardwalk

Three home types: SYLVANA1 (45 m²), SYLVANA2 (55 m²) and SYLVANA3 (65 m²). The houses stand along the curving loops of the boardwalk; they have solar panels and green roofs.

Floor area of the homes	10,880 m²
Footprint of the houses	17,026 m²
Solar panels on the houses	12,056 m²
Green roofs	98, totalling 3,542 m²
Terraces	4,450 m²
Timber decking around the houses	13,850 m²
Storage sheds	98, totalling 907 m²
Golf-cart bays	98, totalling 1,732 m²

House type	Houses	Homes	Home size	Footprint	Floor area
SYLVANA1	25	50	45 m²	152 m² per house	90 m² per house
SYLVANA2	42	84	55 m²	167 m² per house	109 m² per house
SYLVANA3	31	62	65 m²	201 m² per house	131 m² per house
Total	**98**	**196**	–	**17,026 m²**	**10,880 m²**

PROJEKT SYLVANA from a bird's-eye view



The Hévíz hub: community buildings, sports ground, solar carports and the lookout tower; on the left, the oval pergola junctions

D5 Render · 3840 × 2527 px

Bird's-eye visualisations in D5 Render. The first two images show the Hévíz hub with the community buildings, the solar carports and the lookout tower; the others show the semi-detached houses among the trees, along the curving loops of the boardwalk.

The Hévíz hub seen from the forest: the lookout tower, the solar carports, the two community buildings and the private hospital

Semi-detached houses along a loop of the boardwalk, close to the Hévíz hub

Pergola boardwalk between the houses

Among the houses

The pergola sections and branches of the boardwalk lead to every house; the semi-detached houses stand along the loops, among the trees.

Semi-detached houses along the branches of the boardwalk, among the trees

Top view: the main spine of the boardwalk and its loops, with the semi-detached houses alongside

Top view

From above, the layout of the site is easy to read: loops branch off the straight main spine of the boardwalk, and the semi-detached houses stand along them, among the trees.

Boardwalk	approx. 3.5 km
Semi-detached houses	98, with 196 homes
Home types	SYLVANA1–3: 45, 55 and 65 m²

The whole area boundary and the planned park on the satellite image approx. 87 ha

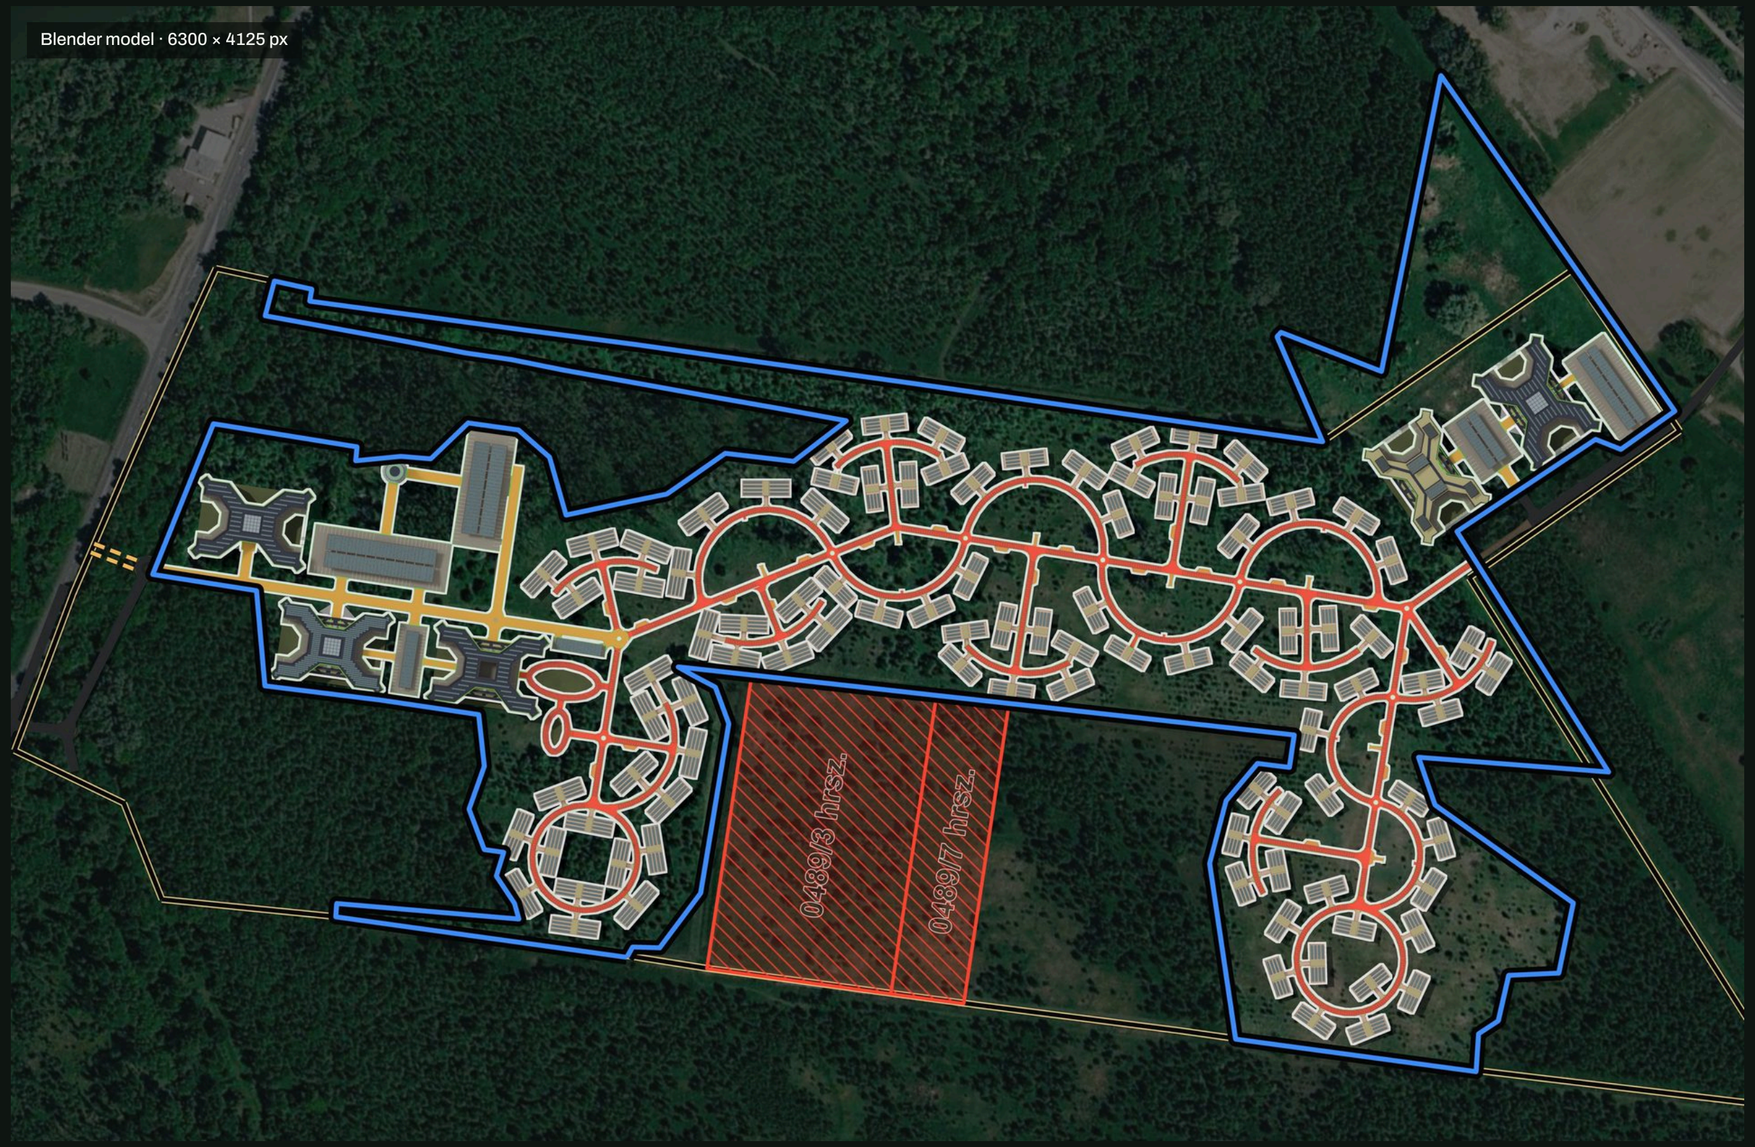
The plot boundaries

The plot boundary on the top view, with the planned park highlighted in colour: buildings, car parks, roads and the boardwalk. The protected area is hatched in red, nothing will be built on it; a dashed line marks the planned entrance from Hévíz. The surroundings beyond the boundary are shown fainter.

Whole area	approx. 87 ha
Building area	approx. 24.6 ha

Areas are rounded; the boundaries were drawn from the plan sheets of the plot.

- Boundary of the whole area
- Boundary of the building area
- Boundary of the park
- Protected (lots 0489/3, 0489/7)
- Planned entrance from Hévíz
- Boardwalk
- Road
- Buildings and carports
- Car parks



The building area boundary and the planned park on the satellite image

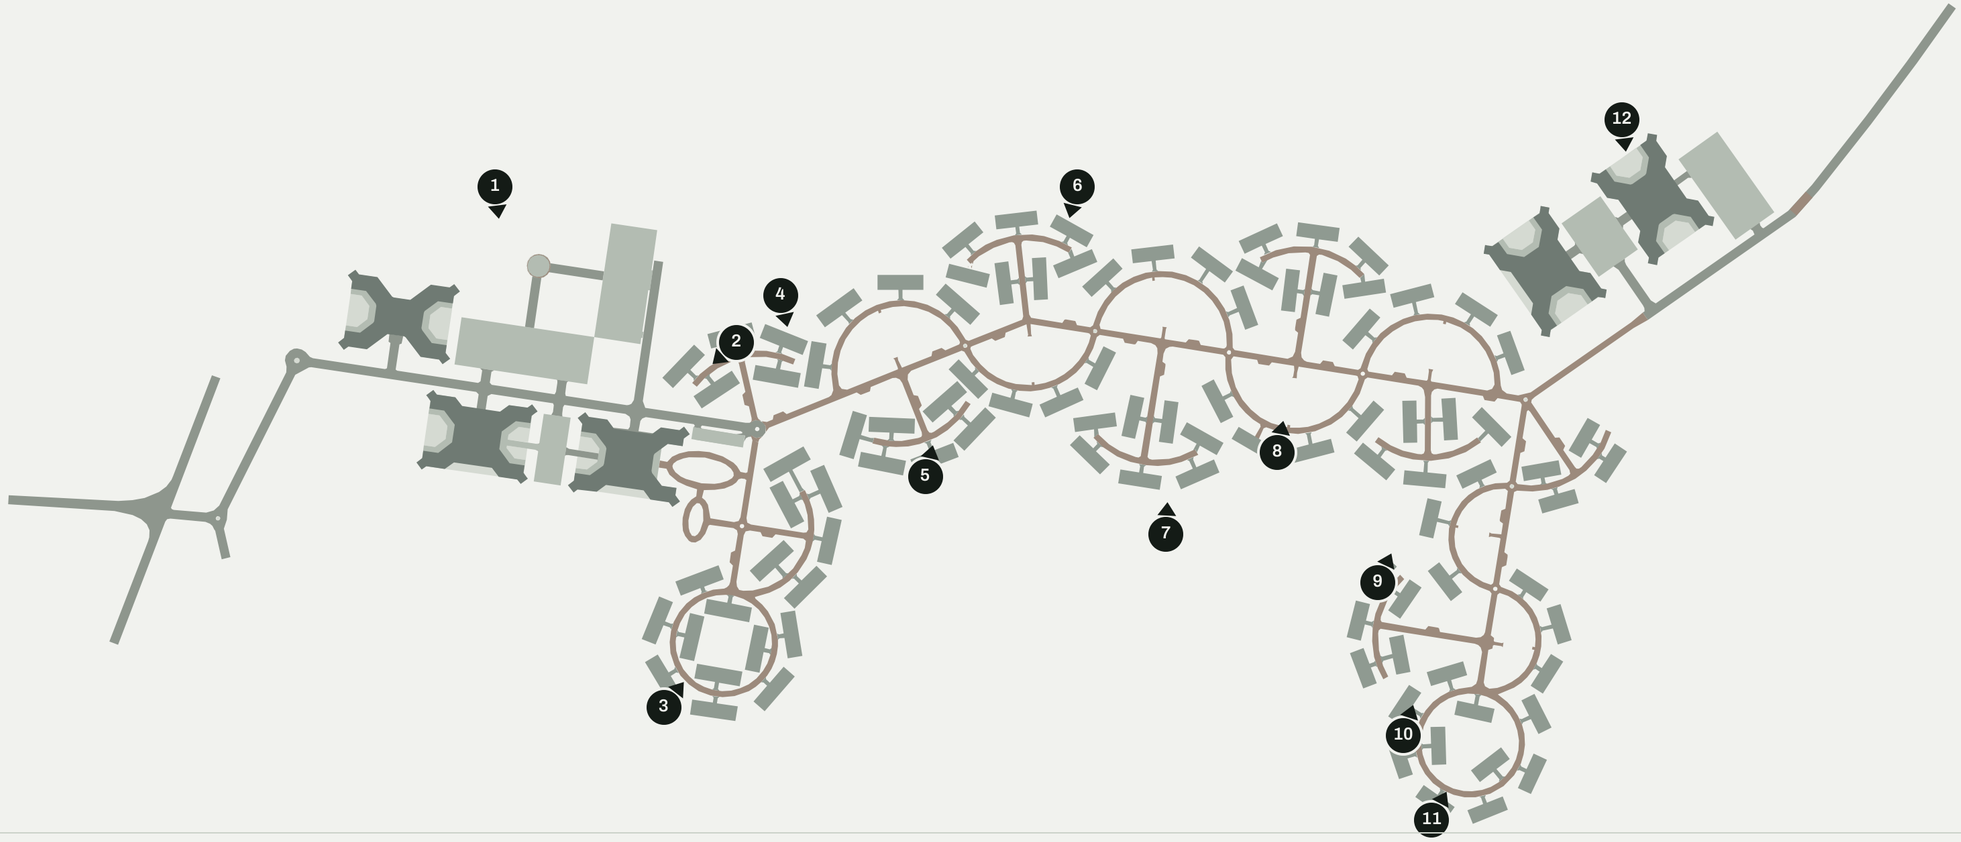
approx. 24.6 ha

The building area

The building area is the part marked for building on the plan. The thin line is the boundary of the park: the buildings, car parks, roads and the boardwalk. Nothing will be built on the protected area.

Perspective views of the model

Twelve perspective views of the complete Blender model, rendered in Cycles with a generated forest. The viewpoints move through the two hubs and the rings of houses in turn. On the map, the numbers mark the viewpoints and the arrows show the viewing direction; the images follow on the next pages.



Perspectives 1–6. Blender model, Cycles render: 3840 × 2160 px, 256 samples/pixel, approx. 21,000 generated trees

PROJEKT SYLVANA in figures

All figures are measured from the 3D model: areas, quantities and parking bays.

196
homes in 98 semi-detached houses, three types: SYLVANA1–3 (45–65 m²)

5
community buildings, including a private hospital, and a 24 m lookout tower

c. 3.5 km
boardwalk, 16,582 m² of timber decking

8,103 m²
of golf-cart paths, 98 bays at the houses

640
parking spaces and 56 EV chargers

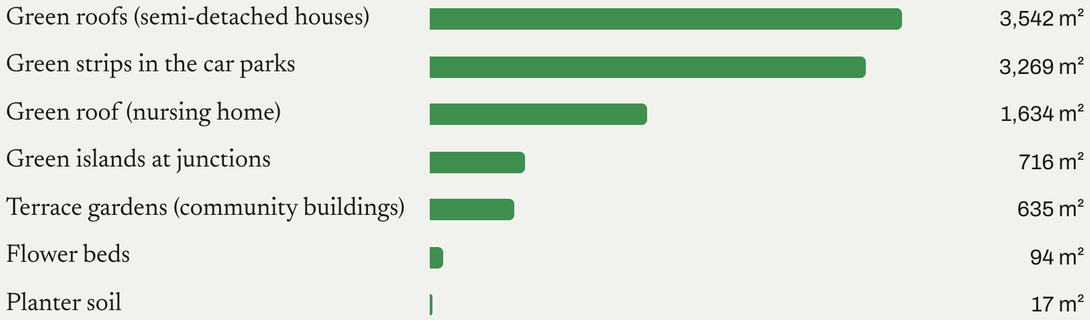
18,471 m²
of solar panels on roofs and carports

9,907 m²
of green roofs, green strips and terrace gardens

19
pergolas, 23 rest areas and 410 lamps on the boardwalk

Green areas in the model

9,907 m²



Solar panels

18,471 m², 1.85 ha

Surface	Area	Share
On the semi-detached houses	12,056 m²	65.3%
On carports	4,333 m²	23.5%
On the community buildings	2,083 m²	11.3%
Total	**18,471 m²**	**100%**

Parking

Marked parking bays	640 (286 + 354)
Total car park area	24,239 m²
Solar carports	6, with 4,333 m² of solar panels
EV chargers	56 (36 for cars + 20 for golf carts)
Golf-cart park	278 m², 20 chargers

International outlook: what can SYLVANA learn from Austria?

Because of the geographical proximity, Hungary is seeing trends similar to those in the neighbouring Austrian nursing-home market. Based on CBRE's March 2026 report, we have summarised what they mean for the project.

Source: CBRE Research, *Nursing Homes in Austria*, March 2026 (with data from Statistik Austria). The figures are taken from the report; the lessons interpret them from the perspective of PROJEKT SYLVANA.

+61–73%
growth in the population aged over 75 in the Austrian regions by 2050

17,500
new beds needed by 2050 in the eastern region bordering Hungary

€185
average total cost of one day of care in Austria (2024)

5.05%
prime yield for nursing homes, end of 2025

Five lessons for the project

SYLVANA is being built close to the Austrian border. Because of this proximity, Hungary is seeing demographic and market trends similar to those of its neighbour, which makes them a good benchmark for the project.

01

+61–73%

Lasting, growing demand

By 2050, the population aged over 75 will grow by 61–73%, depending on the region. The largest jump comes in the 2030s, that is, in SYLVANA's first decade of operation.

02

17,500

Shortage along the border

The eastern region bordering Hungary (Vienna, Lower Austria, Burgenland) needs approx. 17,500 new nursing-home beds by 2050, more than any other Austrian region.

03

87 beds

Advantage of scale

The average Austrian nursing home is small, which raises its operating cost per bed. SYLVANA's coherently planned complex offers the advantage of scale.

04

€185

Pricing benchmark

The total cost of one day of care averages €185 in Austria and €181 in neighbouring Burgenland. This is a useful benchmark for pricing SYLVANA's services.

05

5.05%

Stable investment

Nursing homes are a crisis-resilient asset class with long-term rental income. The prime yield stood at 5.05% at the end of 2025, and investor interest remains high despite the limited supply.

Behind the figures

Key figures from the Austrian market that support the lessons.

c. 50,000
new nursing-home beds needed in Austria by 2050

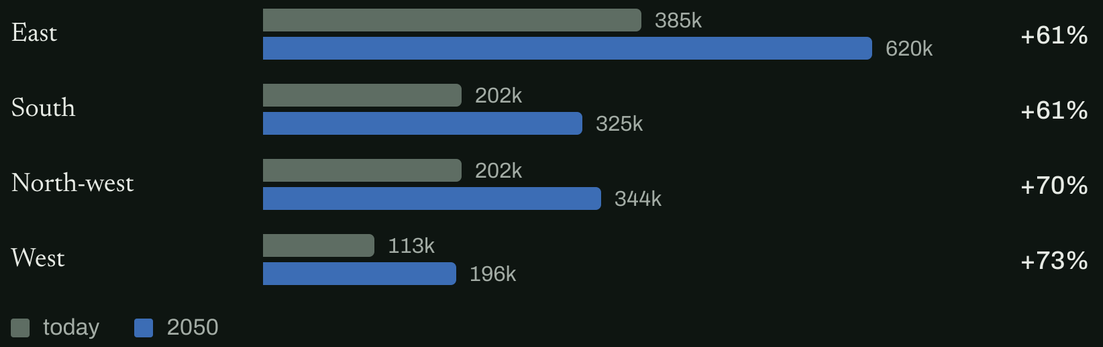
1.3 million
residents aged over 75 by 2040, up from 901,000 today

+32%
growth in the population aged over 75 between 2030 and 2040

17,500
new beds needed by 2050 in the eastern region bordering Hungary

Population aged over 75 by region

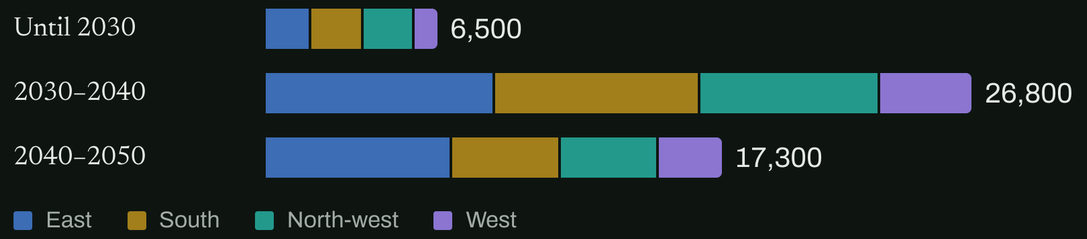
In thousands, today and in 2050.



East: Vienna, Lower Austria, Burgenland; South: Styria, Carinthia; North-west: Upper Austria, Salzburg; West: Tyrol, Vorarlberg.

Demand for new beds

New beds needed, by period and region. Demand peaks in the 2030s.

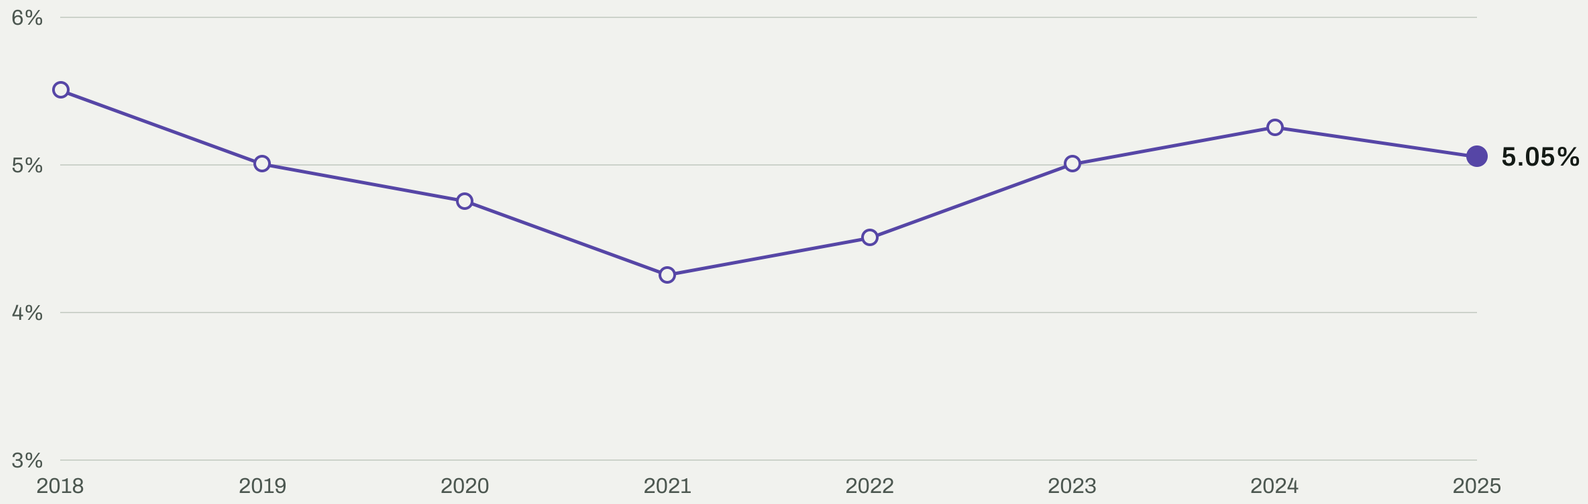


Stable yield, a crisis-resilient asset class

Investors regard nursing homes as a crisis-resilient asset class that provides long-term, predictable rental income. Interest remains high despite the limited supply.

Prime yield, nursing homes, Austria

2018–2025. After the low of 2021, the yield rose above 5% again.



The 2025 value is taken from the text of the report; the earlier years are approximate values read from its chart.

5.05%

Prime yield at the end of 2025

The achievable yield on top-quality nursing-home properties in Austria.

Long-term income

A long-term lease with the operator provides a stable, predictable income.

Backed by growing demand

Steadily growing demand and limited supply underpin the value of the asset class over the long term.

Thank you for your attention!

PROJEKT SYLVANA, Hévíz – Keszthely, 2026. The model was built in Blender; the visualisations were rendered in D5 Render and Blender Cycles.
